Test Summary Report – OpenCart Demo Project

Project Name: Manual QA Testing – OpenCart E-Commerce Demo

Tester Name: [Your Name]

Testing Type: Manual Functional Testing

Test Environment: Chrome Browser, Windows OS

Test Website: <https://demo.opencart.com>

Testing Duration: [e.g., 1 day or July 4, 2025]

Scope of Testing:

Functional testing was conducted on the following modules of OpenCart Demo:

- User Registration & Login
 - Wishlist
 - Cart & Checkout
 - Product Page
 - Address Management
 - Returns
 - Newsletter
 - Session Management
-

Testing Summary:

Metric	Count
--------	-------

Total Test Cases	10
------------------	----

Test Cases Passed	3
-------------------	---

Test Cases Failed	7
-------------------	---

Bugs Reported	8
---------------	---

Key Bugs Found:

- Password change allows skipping current password
- Checkout button doesn't work after adding to cart
- Wishlist persists even after logout

- Address form accepts invalid pincode
 - Newsletter page is blank with no functionality
 - Product page shows "Please select" without showing any option
 - Wishlist items cannot be added to cart
 - Return request allowed without any actual purchase
-

Conclusion:

The site has major issues in critical flows like checkout, wishlist, and user data handling. Most modules are functional but suffer from missing validations or broken UI/UX behavior. Testing revealed that OpenCart demo lacks proper error handling and secure session management.

Recommendations:

- Add validations for password change, pincode, and returns
- Fix the broken checkout redirection logic
- Prevent wishlist/data persistence after logout
- Enable functional newsletter and return modules
- Improve UX in product option handling
